The invention of the claims is a medical device for insertion into a bodily vessel to treat an aneurysm having an aneurysm neck, the device comprising a mechanically expandable device, a therapeutically effective amount of a chemical compound comprising a biosynthesis accelerator to stimulate cell growth, and a polymer mixed with the chemical compound to manage the release rate of the chemical compound wherein the mechanically expandable device provides a support for the release of the chemical compound within the aneurysm to stimulate cell growth within the aneurysm and close the aneurysm neck.

No individual citation or obvious combination of citations disclose a medical device for insertion into a bodily vessel to treat an aneurysm with the above features.

The closest art of:

EP 1470795

discloses an intravascular device for treatment of aneurysmal tissue comprising a stent that delivers a bioactive amount of a therapeutic agent to aid in stabilising and healing the aneurysmal tissue and a polymer carrier which is biodegradable to provide for controlled release of the therapeutic agent over time, but fails to disclose that the therapeutic agent is a biosynthesis accelerator.
